

Micron, for extra protection

Provox Micron HME protects against more than 99%* of airborne micro-organisms.

When breathing through a tracheostoma, particles that are normally filtered out in the upper airway can get into the lower airway.

Protect yourself with **Micron**

Provox Micron HME is a highly effective microbial filter that can **protect against** airborne particles including **viruses and bacteria**.

*Please note: Since pathogens can get into the human body in other ways, ProTrach XtraCare and Provox Micron can never guarantee complete protection. Please read the instructions for guidance.
